Seat Leon Engine Warning Light

The SEAT Leon engine coolant temperature warning light comes on with ignition for a short time then goes out. This is normal procedure. There are two instances where this light may come on; constant or flashing. Constant: This means the engine coolant is overheating and/or there may be insufficient engine coolant.

SEAT Leon Dashboard Lights & Warning Symbol Meanings

Check the coolant level. If the coolant level is correct, the overheating may be caused by a malfunction of the radiator fan. Check the radiator fan fuse and have it replaced if necessary. If the warning lamp lights up again after driving on for a short distance, stop the vehicle and switch off the engine.

How to reset tyre pressure warning light - Seat Leon - YouTube

The worst thing you can do when the light comes on is panic and switch the engine off. As said above, hold it at higher revs for a good long drive to clear the DPF out. Usually a good motorway drive in 3rd gear at around 3000rpm is good enough. Other thing you can do is get a bypass for it, have it mapped out, then it'll go better.
